Introduction

Bristle is a framework that allows one to

- quickly write beamer presentations.

Introduction

Bristle is a framework that allows one to

- quickly write beamer presentations.
- not lose their flow while doing it.

Where?

Bristle can be found at:

<http://www.cse.iitm.ac.in/~spranesh/projects/bristle>

Facts

Bristle is written in Haskell. It's markup language has purposely been kept context free.

Bristle supports arbitrary LaTeX, like *so*.

Stuff can be escaped in Bristle by putting a % as the first character in a line.

Upcoming Features

- 1 A vim syntax highlighter for bristle files
